DETAILED ACTION

Allowable Subject Matter

Claims 1-26 are allowed. The following is an examiner's statement of reasons for allowance:

The closest prior art appears to be JP 11152332 (CAPLUS abstract) which teaches compounds structurally related to those of the instant invention, in particular, the compound RN=226697-53-6. However, the prior art compound (the compound which most closely structurally resembles the instant compounds) contains a 4-alkyl substituted cyclohexyl moiety rather than the 3-alkyl substituted cyclohexyl of the instant compounds. Additionally, this alkyl group of the prior art compound contains less than the minimum 8 carbons of the instant compounds.

The instant compounds are neither taught nor suggested by the cited prior art. Nor would it have been obvious to one of ordinary skill in the art at the time of the invention to modify the compounds of the prior art in order to arrive at those of the instant invention. There is no motivation to do so.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure: US 4,053,637; US 4,103,030; US 4,110,376; US 4,141,993 and US 6,255,439 B1 are cited to show related compounds.
